

# Axtero Shift

Preview

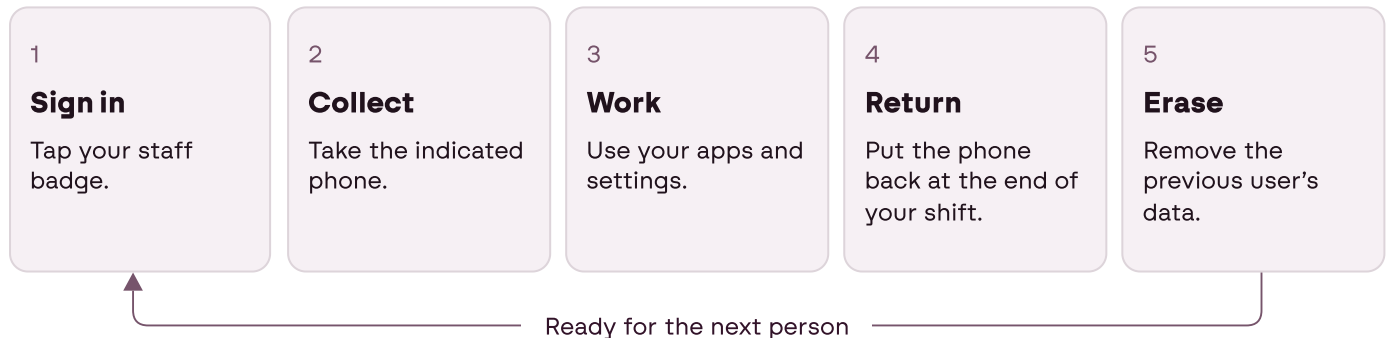

## Share iPhones. Reduce costs.

Your apps. Your settings. Your work number.  
On the iPhone you collect.

Passing phones around can leave photos, messages  
and sign-ins behind. Locking them down limits what  
staff can do. Axtero Shift gives each person their  
own setup and erases their data on return.

## How it works

## Protect data between shifts

Each return removes the previous user's data,  
so it does not pass to the next person.

## Share phones without losing oversight

See which phones are available. If one goes  
missing, you know who had it last.

## Help shape Axtero Shift

Try Axtero Shift with your own team. Work directly with us on the  
workflows that matter to you.
